Abstract (en)

[origin: WO2009150622A2] This invention refers to encrypted marking and a method for protection, verification, and certification of products' authenticity by means of unique encrypted marking containing very large amount of encrypted information embedded in each very small element (dot) of the marking, which is protected and which may be recovered [reconstituted] in case of wear, contamination, or deletion. The encrypted marking is obtained by means of stochastic modularization and alteration of the elements of the marking
