Abstract (en)

[origin: EP2196972A1] An object tracking system is described comprising - a plurality of sensor nodes (10) that each provide a message (D) indicative for an occupancy status of a detection area of an object infrastructure monitored by said sensor node, - a map-integrator with - an object database facility comprising state information of objects present at the object infrastructure, and a database updating facility (DBU) for updating the database facility (32, 34) on the basis of messages (D) provided by the sensor nodes.
