Abstract (en)
[origin: WO2010079122A1] The invention relates to an electrical connecting terminal for feeding a line through a wall 1, comprising a first terminal 2 for attaching to one side of the wall and a second terminal 3 for attaching to the other side of the wall 1, wherein the first terminal 2 comprises a connecting element 4 for connecting to the second terminal 3, the connecting element 4 can be inserted into the second terminal 3, the second terminal 3 comprises a busbar 6 for electrically connecting to the first terminal 2, the busbar 6 can be inserted into the connecting element 4, and the surface of the connecting element 4 facing away from the busbar 6 comprises a leakage current extension 10. The leakage current extension 10 according to the invention enlarges the leakage distance so that the electrical connecting terminal according to the invention can be exposed to higher voltages.
