Abstract (en)

[origin: EP2374367A1] The stripper (1) has a stripper section (3), and a holding section (2) for holding the stripper at a storage container. A functional layer i.e. passage section (4), is arranged between the stripper and holding sections, and has a screen layer (S). The screen layer has passage openings (5) arranged directly adjacent to each other and separated from each other. The openings connect the container with a stripper antechamber (6). The screen structure is made from metal i.e. stainless steel, and the stripper section is made from elastic material. The functional layer is made from expanded metal. An independent claim is also included for a cosmetic unit comprising a stripper.
