Abstract (en)
[origin: EP2374369A1] The ejector has an actuator that is provided with a contact surface. The contact surface is provided at a retainer at a side or a projection of an activator (6). The side is provided opposite to the projection of the activator. The contact surface is formed in relation to a perpendicular plane to the direction of movement of the actuator. The projection is moved out by a pre-determined force on the contact surface by deformation of a wall of housing (4) from the retainer.
