Abstract (en)

[origin: EP2374378A1] The assembly (1) has an upper fixing profile (15) comprising a longitudinal groove at an upper part of its front surface. Edges of the groove horizontally extend forward to create a free volume under the edges when an upper trimming profile (16) is fixed on the front surface of the upper fixing profile. The width of the edges extending horizontally forward is equal to or slightly greater than the thickness of a mirror (9). The free volume created between the upper fixing and trimming profiles forms a longitudinal groove to house an upper edge (25) of the mirror.
