Abstract (en)

[origin: EP1982891A1] A swivel frame for a rail vehicle comprises a bottom frame (3) for fixing on an undercarriage of the rail vehicle, and a top frame (5) for accommodating a container. The top frame (5) is connected to the bottom frame (3) so that it can pivot between a swung-in position, in which the top frame (5) runs substantially parallel to the bottom frame (3), and a swung-out position, in which the top frame (5) runs at an angle relative to the bottom frame (3). The bottom frame (3) is provided with a number of corner blocks (12), which can be fixed detachably on the undercarriage of the rail vehicle.
