Abstract (en)

A stacking machine comprising a launching device (3) to handle standard and elongated postal items (40) one by one, a bottom wall (18) to support a longitudinal side of the postal item when the latter is processed by the launching device (3), a stop wall (9) facing the launching device (3) to stop the postal items launched by the launching device (3), a compacting module (6) comprising a resting plane (15) to support a longitudinal side of the stacked postal items (40) processed by said launching device (3), and a first helix (10) arranged to engage a tail portion (42) of a postal item (40) exiting the launching device (3) and configured to guide the tail portion (42) towards the compacting module (6) and to free the outlet of the launching device (3), the stop wall (9) being spaced from the launching device (3) so that when a C4 postal item contacts the stop wall (9), the first helix (10) engages the tail portion of the C4 postal item.
