Abstract (en)
The profile element (11) has a part (17) for partially covering a shadowing groove (12) formed between two structures e.g. ceiling element (13) and wall (14), such that a retaining chamber (18) is formed for a light element (19). The light element indirect illuminates a surface (21) of the structures and/or a room (22) limited by the structure surface, where the profile element has a double T-shaped cross section. A common U-shaped base separates another retaining chamber from the former retaining chamber, where the latter retaining chamber retains the structures.

Abstract (de)
Die Erfindung betrifft ein leistenförmiges Profilelement (11) zur Bereitstellung einer Schattennut (12) an bzw. in einem Baukörper, die Verwendung eines solchen Profilelements (11) als baukörperintegriertes Leuchtengehäuse und eine Leuchte (10) mit einem solchen Leuchtengehäuse.
