Abstract (en)

[origin: EP2375182A2] The house wall duct (100) has splitter attenuators arranged substantially parallel to an air passage direction of the wall bushing. Two sections (101,102) are designed such that the former section and the latter section are pushed telescopically into one another. A damping material (140) is arranged between the two sections, where a protective grid (110) is arranged at an exterior wall.
