Abstract (en)

[origin: WO2010066793A1] What is described is a device for guiding a value document (16) along a section of a transport path in a predefined transport direction, comprising a film formation device (50) that is adapted to form a film (52) of gas flowing in the transport direction on each of opposite sides of the transport path section, said gas film extending at least over the entire width of the transport path section and thus the entire width of the value documents transported along the transport path such that the value documents are guided between the gas films.
