Abstract (en)

[origin: WO2010078979A1] With dishwashers, discolorations can occur on plastic materials, resulting from food residue of color-intensive foods such as curry, paprika, tomatoes, red cabbage, ketchup or carrots that are introduced into the dishwasher with the dishes to be cleaned. The occurrence of said discolorations was to be reduced. This was substantially achieved by the use of porous polyamide particles and/or synthetic layered silicates.
