Abstract (en)

[origin: WO2010076203A1] The present invention relates to a washing machine (1) comprising a body, a drum (2) wherein the laundry to be washed is disposed and which provides washing and spin-drying by rotating around an axis, a motor (3) which provides the drum (2) to be activated, and a control unit (6) that has a safety module (5) wherein the data such as unbalanced load detection and abnormal condition detection, that relate to safety, are controlled, and an algorithm module (4) wherein the washing, rinsing and spin-drying steps and their durations are controlled.
