Abstract (en)
[origin: CA2746860A1] The invention relates to a wall lining having wall panels (1) and mounting profiles (2), each having a receiving groove (4) that is open toward the bottom for a lower wall panel (1), a receiving groove (3) that is open toward the top for an upper wall panel (1), and an engaging groove (5) between the two receiving grooves (3, 4) for fastening hooks. In order to be able to use wall panels (1) having different thicknesses, it is proposed that, in the direction of the groove depth, the two receiving grooves (3, 4) of the mounting profiles (2) which can be attached to the wall (6), said grooves forming a stop surface (9) for the outside of the wall panels (1) on the side facing away from the wall (6), form at least two sections (11) having different widths for mounting wall panels (1) having different thicknesses.
