Abstract (en)
[origin: WO2010066558A1] The invention relates to a synchronizing device (1) of a motor vehicle transmission, comprising at least one first friction partner (8) and one second friction partner (4), wherein a friction ring (13) is arranged between the first friction partner (8) and the second friction partner (4) and is freely movable in the circumferential direction between the first friction partner (8) and the second friction partner (4) in the unconnected state, wherein the friction ring (13) is designed as an open ring body having two ring ends (19, 20) pointing toward each other.
