Abstract (en)  
[origin: WO2010066538A2] The invention relates to an ice cube container (18) of an ice maker for household purposes, comprising a bottom (29), short front and rear wall sections (30a, 30b) and two long sidewall sections (28a, 28b), and a removal handle (26). In order to design an ice cube container (18) of an ice maker for household purposes and an associated refrigeration appliance (1) in which the ice cubes are easy to remove, the removal handle (26) is arranged on one of the long sidewall sections (28a, 28b). The invention further relates to a refrigeration appliance (1), especially for household purposes, comprising an ice maker, an ice cube container (18) that can be removed from the refrigeration appliance (1), in particular an extractable freezer compartment drawer (14) which has a receptacle (25) for a removable ice cube container (18). In order to be able to unmistakably place the ice cube container (18), the receptacle (25) can be designed in a shape or contour corresponding to the ice cube container and can be oriented in the freezer compartment drawer (14) in such a way that the removal handle (26) of the ice cube container (18) faces the center of the freezer compartment drawer (14) when the ice cube container (18) is inserted in the receptacle (25).
