Abstract (en)  
[origin: WO2010037795A1] The invention relates to a method of control for a driving aid system onboard a vehicle (1), said system comprising:- at least one camera (3a,3b,3c,3d,3e,3f,3g,3h) for capturing video streams of the environment of the vehicle (1), - a control unit (5) for generating a three-dimensional scene according to a predefined viewpoint comprising: a three-dimensional representation (9) of the vehicle (1), and at least one image obtained on the basis of the video streams captured, and - a display screen (13) for displaying the three-dimensional scene generated. According to the invention, said method comprises the following steps: - a control trajectory (15) is entered on a touch surface (7) integrated into the display screen (13), - a command associated with said trajectory (15) is generated for modifying said scene. The invention further relates to a driving aid system for implementing such a method.
