Abstract (en)

[origin: EP2378029A2] The device (10) has a connection construction unit exhibiting a rotation axis that runs perpendicular to a longitudinal direction of a u-shaped supporting profile. The device is brought in a position running perpendicular to a longitudinal axis of a stand tube (30) under the effect of gravitation in a condition, in which the stand tube is attached in a detachable manner. A form fit unit is provided at the profile such that form-fit fixation of the profile at the stand tube is produced transverse to the longitudinal direction of the profile, in an attached condition.
