Abstract (en)  
[origin: EP2378032A1] The invention related to a construction containment system (100) which comprises a flexible net (101) and a rigid elongated member (102) adapted to be arranged at an edge of the flexible net (101). The system further comprises a post (103) having an upper engagement (104) means at an upper end thereof for bringing the post (103) into engagement with an overhead element (10) as well as lower engagement means (105) at a lower end of the post (103) for bringing the post (103) into engagement with an underlying element (20). The post (103) is also provided with coupling means (106) provided for coupling of the rigid elongated member (102) to the post (103).
