Abstract (en)  
There is described a stenter comprising: a fabric feeding path (P); on top and below the path (P), respectively a first blowing member (3A) and a second blowing member (5A); a heat generator (9) for heating a air flow; a first fan (11) for feeding hot air towards the first blowing member (3A) and a second fan (13) for feeding hot air towards the second blowing member (5A); an air flow conduit (7) from the heat generator (9) to the fans (11,13). Baffle plates (31,33,34,35) are arranged in the flow conduit, which favor the mixing of the air flows sucked by the two fans (11,13).
