Abstract (en)
[origin: EP1947499A2] A low-light viewing device (100) includes a housing (105), having mounted thereto: a lens (110), an electronic camera (200) for receiving light focused by the lens and for providing an output signal; a display (115) for receiving the output signal and displaying an image detected by the camera; a controller (208) for controlling the camera and the display, and a user interface (120) for operating the controller. The lens may be a fixed focus lens having an F number of less than about 1, and a T number of less than about 1.5. The display may have a resolution at least as great as the resolution of the camera. The device may have a processor programmed to provide control signals to the camera and display depending on a selected light environment.
