Abstract (en)  
[origin: WO2010073079A1] This invention provides a device for allowing a user to transport loads supplied with handles, particularly plastic bags, sacks, bottles packaging and the like. The device comprises a body (1), substantially annular-shaped, on which an outer surface (8) is distinguished provided with a longitudinal seat (2; 202, 202') into which the handles of the load are placed, and an inner surface (7) provided with grooves (3, 3'; 203, 203' ) configured to hold the fingers of a user. In accordance with the invention, the grooves are arranged on the inner surface (7) in such a way as to realize two different handgrips (3, 3'; 203, 203') substantially opposed one to the other, while the longitudinal seat (2; 202, 202' ) is on the outer surface (8) at least in correspondence of the handgrips.
