Abstract (en)

[origin: WO2010070236A1] The subject of the invention is a formulation for the transmucosal administration of at least one active principle from the family of Setrons, constituted of said active principle in base form and/or in salt form, an aqueous-alcoholic solution titrating at least 30° alcohol, and optionally a pH correcting agent, said active principle being present in the state of stable and complete dissolution in the aqueous-alcoholic solution. The invention also relates to a process for preparing this formulation and to its use for the treatment and prevention of major nausea and/or emetic syndromes, and also for the treatment and prevention of digestive spasms.
