Abstract (en)

[origin: WO2010072292A1] The invention relates to system for determining sorting information for mail, comprising a control device (105) disposed in a first postal center (101), designed for transmitting reading instructions to a reading device (103; 104) on the basis of received transmission images, in which the sorting information can be determined, the control device comprising a first standard interface (116) for inputting transmission images. The system is characterized in that a transmission device (113) is designed for receiving a transmission image of the mail in a second postal center (108) and transmitting the same to the control device (105) via the first standard interface (116), so that the control device (105) generates a reading instruction for the reading device (103; 104) regarding the transmission image. The invention further relates to a further system, in which the transmission device (113) can receive transmission images in the second postal center (108) via a standard interface (117).
