Abstract (en)
[origin: WO2010067310A1] The electrolysing apparatus (10) produces and separates combustible fluid, particularly combustible fluid containing predominately oxygen and hydrogen, formed during the electrolysis of an electrolytic solution disposed in the apparatus (10). The apparatus (10) comprises a first outer electrode (12), being an anode, a second outer electrode (14), being a cathode and two spaced apart foraminous members, a first foraminous member (16) and a second foraminous member (18), arranged generally parallel to one another and located between the two end electrodes (12 and 14).
