Abstract (en)

[origin: WO2010076138A1] The present invention relates to a household appliance (1), for example a washing machine, comprising a control panel (2), a switch (3, 103) which is located on the control panel (2), and which provides the household appliance (1) to be turned on and off by being energized or beside the function of turning on/off, which has the program (P) select function as well, more than one push button (4) which determines the auxiliary functions (F) to be applied, a start button (5) which provides the selected program (P) to be started and when desired, which provides the program (P) to be paused by being pressed again, and a microcontroller (6) which activates the key lock function (KL) and blocks the functions of the buttons (4, 5) when the push button (4) combination, defined in the software, is pressed by the user.
