Abstract (en)  
[origin: WO2010081681A2] Disclosed is a drainage system (2) comprising at least one, in particular several seepage boxes (1) that can be arranged in at least one horizontal position, especially on top of each other. Said drainage system (2) is characterized in that the upper face and the lower face of the seepage box (1) have an especially interlocking profiled section (7, 6). Furthermore, the drainage system (2) comprises at least one reinforcement plate (10, 10') that has a profiled section (11, 12) on both sides. The upper profiled section (11) of the reinforcement plate (10, 10') is designed to interlock with the lower profiled section (6) of a seepage box (1), while the lower profiled section (12) of the reinforcement plate is designed to interlock with the upper profiled section (7) of a seepage box (1).
