Abstract (en)

[origin: WO2010083846A1] The invention relates to a method for supplying a multiphase electrical network (17) by means of an electrical generator (1) on a regenerative power source, connected to the network (17) by means of a converter (4 to 12), by means of which the amplitude of the supplied current and the phase angle thereof can be controlled in relation to the voltage, wherein the control for each phase is carried out independently.
