Abstract (en)  
[origin: WO2010069791A1] A light-permeable hot plate comprises at least one cavity filled with illuminating means, said cavity being filled with at least one illuminating means, wherein the at least one illuminating means can be excited to illuminate by means of an electromagnetic excitation field. The induction hob comprises at least one such hot plate. The method for producing a hot plate comprises at least the following steps: (a) ventilating the cavity; (b) filling the cavity with the at least one illuminating means; and (c) sealing the cavity.
