Abstract (en)

[origin: WO2010078998A2] The invention relates to a refrigerator, in particular a household refrigerator, having an evaporator, which from time to time undergoes a defrosting process of a defrost heater (101), which is turned off by a temperature sensor (107) arranged close to the evaporator after reaching a predetermined temperature according to the temperature sensor or after a predetermined time period, wherein the defrost heater (101) is designed to create at least two different defrost temperatures during a defrost process according to a predetermined defrost temperature curve.
