Abstract (en)  
[origin: WO2010069721A2] The invention relates to a refrigeration device, in particular a domestic refrigeration device comprising a compressor (9) that is connected in a refrigeration circuit and a condensation collection container (17) that collects the condensation formed during the operation of the refrigeration device, the base (19) of said container sitting on an upper face of the compressor (9). According to the invention, the base (19) of the condensation collection container (17) is designed with a lateral wall (21) that extends downwards and surrounds the sides of the compressor (9).
