Abstract (en)
[origin: WO2010072491A2] A refrigeration device comprises a built-in unit, especially a pull-out drawer (4), which is guided on telescopic pull-out elements (5) so that it can be pulled out from an interior space (3). Every telescopic pull-out element (5) comprises at least one rail which is stationary (9) in the interior space (3), a rail (12) which can be displaced together with the built-in unit (4) in a depth direction of the interior space (3) and a cover part (13) extending along the mobile rail (12). At least one first cover part (13) and the built-in unit (4) have contours (16, 28) which are complementary to each other and engage with each other in a form-locking connection in a width direction of the interior space (3).
