Abstract (en)

[origin: WO2010072286A1] The invention relates to a micro-distribution cable (1) for optical communications, comprising a loose buffer (10), wherein at least two leads (14) are run in the loose buffer (10), wherein the two leads (14) of the loose buffer (10) are configured with plugs (33) on at least one side, wherein the micro-distribution cable (1) comprises a distribution element (20) comprising a first area (22) in which a part of the loose buffer (10) is run, and a second area (23) in which the leads (14) are run, wherein the second area (23) comprises means for fixing tubes (12) or single loose buffers (47), in which the leads (14) are run to the plugs (33), and to a method for producing a micro-distribution cable (1).
