Abstract (en)

[origin: WO2010076450A1] The invention relates to a multimedia system (10) including: a server (12) provided with an operating system (13) managing the allocation of the resources thereof to software applications (14, 16), the activation of which can be determined by a control application (18); and a client terminal (24) provided with a display device and a remote control (26); wherein the server (12) and the client terminal (24) are provided with a first graphical interface (20) and a second graphical interface (22), respectively, communicating via an image-sharing protocol, characterised in that the server (12) includes: a means (20) for identifying commands related to the control application (18) thereof in signals transmitted by the terminal via the graphical interfaces (20, 22) so as to follow said commands; and a means (20) for generating an image particular to the control application so as to transmit said image to the terminal via the graphical interfaces (20, 22).
