Abstract (en)

[origin: WO2010069741A1] The invention relates to a contacting plug (1) for contacting an insulator (18), particularly a circuit board, having two clamping jaws (2, 3) that can be swiveled crosswise to an insertion direction (E) relative to one another, of which at least one is designed as at least one contact holder (4, 5), carrying a spring-loaded contact element (6), which is designed to lie on the insulator (18) having a contact force and having spring means (7) to create a clamping force independent from the contact force. According to the invention, the spring means (7) are designed to create the clamping force solely on the contacting plug (1) in a supporting fashion.
