Abstract (en)  
[origin: WO2010069720A1] The invention relates to a food preparation device comprising at least a transmitter for transmitting data to an external unit, at least one integrated circuit for processing data and for outputting data to the transmitter based on the processing, and at least one energy absorber for absorbing energy from an electromagnetic excitation field for the power supply of the food preparation device and/or for the supply of at least the integrated circuit and the transmitter. The operating device is configured to operate such a food preparation device and comprises a control unit which in turn is configured to carry out a comparison between the intrinsic temperature and at least one threshold value of the intrinsic temperature when the intrinsic temperature data is received.
