Abstract (en)
[origin: WO2010069828A1] A household attachment device or a household operating device can comprise in each case at least one power coil with in each case at least one power winding for inductively tapping energy from an electromagnetic excitation field or for the generation thereof, wherein the respective power winding lies in a power winding plane, and can further comprise in each case at least one signal coil with in each case at least one signal winding, wherein the signal winding lies in a signal winding plane. The power winding plane lies essentially parallel to the signal winding plane.
