Abstract (en)

[origin: WO2010071913A1] The invention relates to a lighting system for actuating at least two lighting means, comprising - at least two different lighting means, - an operating device for operating the lighting means, wherein the operating device has at least one interface; - wherein the lighting means are actuated differently from each other depending on a signal supplied by way of the interface. The signal that is supplied by way of the interface can be a signal of a motion sensor or a relay.
