Abstract (en)

The drilling device has a rotary drilling bar (12) and a drilling arm (22,24) that is articulated at lower end section of the rotary drilling bar. A cutting head (26,28) is fixed at ends of the drilling arm. The cutting head is moved back and forth by positioning elements relative to a rotational axis (R) of the drilling bar. The positioning elements pivot the drilling arm. Independent claims are also included for the following: (1) a drilling method for a caisson; and (2) a caissons combination, which has a drilling device provided with drilling arm that is placed at open bases of the caissons.

Abstract (de)

Eine Bohrvorrichtung umfasst eine Bohrstange, an deren unterem Endabschnitt ein Bohrarm angelenkt ist. Am Ende des Bohrarms ist ein Schneidkopf befestigt, der relativ zu der Bohrstange verschwenkbar ist.
