Abstract (en)

The invention relates to a parking roof system comprising: - a plurality of adjacent tiles (16), which compose a drivable surface; - a plurality of tile supports (10) for supporting the tiles; and - connecting means for connection of at least two adjacent tiles, such that at least in the plane of the drivable surface a shape based connection is provided; wherein the contact surface between a tile and a tile support is substantially equal to the overlapping part of the tile and the tile support as seen perpendicular to the drivable surface.
