Abstract (en)

[origin: EP2381456A2] In accordance with an example embodiment of the present invention, an apparatus comprises an element having at least one elongated member (325), the at least one elongated member having at least one conductive end (330) and being extendable from a retracted position to at least one extended position; a component coupled with said element, the component having at least one conductive surface (315) at least partially opposing a side of said at least one conductive end when said at least one elongated member is in said at least one extended position; and a dielectric disposed on at least one of said at least one conductive end and said at least one conductive surface.
