Abstract (en)  
[origin: WO2010085994A1] The invention relates to a closure component having a plurality of closure components (12) each disposed on a carrier part (10) by means of a footer (18) and each comprising a header (14) connected to the footer (18) by means of a shaft part (16), wherein the header (14) is jointly connected to the shaft part (16) by means of a hinge part (20). Because the footer (18) forms a further hinge part (22), by means of which the shaft part (16) is jointly connected to the carrier part (10), improved adhesion to third components can be produced relative to the known solutions.
