Abstract (en)

[origin: WO2010064986A1] The present invention relates to a multiple-use pallet, comprising a load surface with two mutually perpendicular sides and at least two supporting legs for supporting the load surface, which supporting legs each have a supporting surface facing away from the load surface. The supporting legs are substantially parallel to each other and have an extent parallel to one of the two sides of the pallet. At least one of the supporting surfaces extends up to the load surface and forms part thereof. The invention further concerns a system of multiple-use pallets. The system comprises at least two multiple-use pallets, each pallet having two mutually perpendicular sides, which each have a certain length. The length of one side of the first pallet is a first integer multiple of the length of one side of the second pallet, and the length of the other side of the first pallet is a second integer multiple of the length of the other side of the second pallet. Any one of said first or said second integer multiple is different from one (1). The pallets are stackable in one another.
