Abstract (en)
[origin: WO2010063528A1] A container (10) for tobacco industry products, the container (10) being adjustable between an open configuration and a closed configuration comprises an interior region (50) and first and second parts adapted to slidably fit together such that sliding one of said parts towards the other part causes the interior region (50) to become sufficiently pressurised so that pressure is perceivably released upon opening the container (10).
