Abstract (en)
[origin: WO2010072591A1] The invention relates to a refrigeration device (10), especially a refrigeration/freezer combination unit (10), having a housing (11) comprising a first and a second interior space (21; 22) 10, wherein the first and second interior space (21; 22) are provided for accommodating chilled goods and are connected by an air channel (50) to form an air flow from the first to the second interior space (21; 22). The refrigeration unit (10) is characterized in that the air channel (50) has at least one intermediate wall (55) in one region for dividing the air flow into at least two partial flows.
