Abstract (en)  
[origin: WO2010080767A1] A phased array antenna (PAA) is provided. The PAA includes a plurality of layers fabricated using an additive process such that the PAA conforms to a curvilinear surface (101A). The plurality of layers include: a radiating layer (102) placed on a first surface of a first dielectric layer (104); a feed layer (106) operationally coupled to a second surface of the first dielectric layer (104); and a second dielectric layer (112) having a first surface operationally coupled to a power and control layer (110) and a second surface operationally coupled to a ground layer (114). An adhesive layer (108) operationally couples the feed layer to the power and control layer.
