Abstract (en)
[origin: EP2382886A1] The shoe (1) has a collar (3) formed in a piece with a rigid shell low-cut (2) and connected to the low-cut by a material bridge (33) allowing pivoting of the collar with respect to the low-cut around a transverse axis of the shoe. The collar and the low-cut define a front opening extending between a kick and an upper part of the shoe, where the collar comprises two side linings arranged opposite in the upper part of the shoe. A tongue (4) is pivotally mounted at a front part of the low-cut for closing the opening and presenting lower surfaces superimposed to the side linings.
