Abstract (en)
[origin: EP2382905A2] The hollow profile has a U-shaped profile and another U-shaped profile, where the both profiles are overlapped and the resulting width of the hollow profile is variable and fixed. One of the profiles has a channel-shaped receiver, in which a pin-shaped element (20) is inserted and is fixed in different positions by rotation. The pin-shaped element is connected with the latter profile.
