Abstract (en)

[origin: EP2383037A1] The feedstock comminuting device comprises stator tools, which are formed by segments (21), formed a comminuting surface rest on a stator with their rear side and lie with their long sides against one another. Segments are attachable to the stator with their first short side and second short side by a positive fit. The stator has a clamping element that works together with the first short side and the second short side to clamp the segments against the stator.
