Abstract (en)

[origin: EP2383411A1] Unclamping device for an automatic door, comprising a drive unit (M) for acting automatically on the door (2) to open and/or close it, the action of the unit (M) being transmitted to the door (2) by means of transmission means (1) attached to said door (2) and to the unit (M), unclamping means (3), which, arranged in an automatic position (P1), enable the automatic action on the door (2), and which, arranged in a manual position (P2), prevent said action and enable a manual action on said door (2), and operating means (4) to cause the change of position of the unclamping means (3). With the unclamping means (3) in the manual position (P2), the unit (M) is decoupled from the transmission means (1), said transmission means (1) remaining attached to the door (2) at all times.
